Regression line equation
Median Inh-A = $A * B^{((GA(days) - C)^2)}$
A = 140.4769

GA (completed weeks)	GA (days)	Number of samples	Expected median Inh-A (pg/mL)	Observed median Inh-A (pg/mL)
14	102.0	273	161.422	179.300
15	109.0	1441	147.961	156.500
16	115.0	2584	141.991	142.300
17	121.0	1245	140.537	135.400
18	128.0	621	144.387	144.900
19	136.0	370	156.781	150.600
20	143.0	227	176.259	155.100
21	149.0	113	201.499	174.900
22	156.0	32	244.925	173.300
